Testimonial

Delivery of Biogas Digester Lids

On a recent wastewater treatment plant digester lid replacement project, Eneraque utilised the membrane digester lids, fan blower assemblies and pipework supplied by AJ Tensile Fabrications.

AJ Tensile became the obvious choice of fabrication partner to deliver this project with for our gas holder needs early in the scoping stage of the project, providing competitive pricing, industry experience, helpful advice and backed up by a respected product.

I am happy to say that Richard, Raul, Rafael and the team at AJ Tensile satisfied our expectations, meeting their project commitments and delivering prompt service when we had installation or design queries surrounding the product. Eneraque have been able to proudly deliver, install and commission a ground-breaking Australian installation that the end client and builder have been impressed with, utilising AJ Tensile manufactured products.

Regards,

Noel Rosario
Project Manager
